13. ETHICAL CONDUCT	14
A1. APPENDIX – PLAGIARISM	15
A2. APPENDIX – FORMS	18

1. INTRODUCTION.

- 1.1 *Graduate Programs in Chemistry.* The Department offers programs leading to the degrees of Master of Science (M.S.) for students seeking an education at an advanced level in chemistry and Doctor of Philosophy (Ph.D.) for those preparing for careers in which chemical research is a central activity.
- 1.2 *Purpose and Content of the Handbook.* A detailed account of the academic requirements and procedures is provided. The intent is to describe the programs and explain the rationale behind them; to delineate the responsibilities of students, faculty committees, faculty members and the administration of the Department; to promote consistency in procedures and standards; and to provide a basis for communication between the faculty and students regarding expectations for performance and achievement.
- 1.3 *General Information.* A general summary of the academic structure is found in the Tufts University Arts & Sciences Bulletin. Graduate School of Arts and Sciences regulations are found in the "Guide for Graduate Students" available in the Graduate School office and on the Graduate School website. **It is the responsibility of each graduate student to become aware of the academic requirements, procedures and deadlines of the Graduate School of Arts and Sciences and the Department of Chemistry.**

2. THE GRADUATE COMMITTEE (GC)

- 2.1 *Channels of communication.* All communications from students concerning the rules described in this handbook, including specific clarifications and petitions for exceptions, should be addressed to the Graduate Committee via the Graduate Committee Chair. This committee is charged with the responsibility of monitoring each student's progress through the rules and requirements delineated in this handbook.
- 2.2 *The Role of the Graduate Committee.*
 - (a) The GC serves as the interim academic advisor when the student enrolls. The GC will advise in planning a program which will provide the core and background needed in the student's area of intended concentration. The GC Chair will approve the student for registration on SIS (<https://sis.uit.tufts.edu/>).
 - (b) The GC is charged with determining whether Tufts University courses outside the chemistry department are acceptable for graduate credit. Requests must be in the form of a petition to the committee and must include a course description.
 - (c) The GC is charged with the evaluation of transfer credits for entering students with previous graduate course work according to the policies described in Section 3.5. Requests are made using **Form E**.
 - (d) The major responsibility for advising passes to the student's research committee when appointed (see Section 5). However, the GC continues to monitor each student's progress in its record-keeping capacity.
- 2.3 *Academic review.*

At the end of each semester, the student's record is reviewed by the GC. Candidates with unsatisfactory progress will be placed on departmental academic probation (Section 11). Additionally, the graduate school may also have grounds for placing the student on academic probation (see the Graduate School "Guide for Graduate Students" for details on Graduate school policy). The student is responsible for adhering to all academic guidelines and procedures for the Chemistry Department and the Graduate School of Arts and Sciences.

3. REQUIREMENTS AND QUALIFICATION FOR DEGREE

3.1 Responsibility. A graduate student accepted into the M.S. or Ph.D. program must satisfy all requirements for that program. To obtain the Ph.D. degree, students must complete the requirements according to the time table delineated below, unless a written exemption is obtained from the Graduate Committee. Even though a periodic review is made by the Committee, each student is personally responsible for ensuring that all requirements are fulfilled. The Ph.D. is a research degree that culminates in a thesis defense; **making sufficient progress in research is the primary responsibility of Ph.D. students.**

3.2 *The Core Course Requirement for Ph.D. Candidates*

- (a) Ph.D. candidates must demonstrate proficiency in the traditional areas of chemistry (analytical, inorganic, organic, and physical) by passing with a grade of B– or better an approved graduate level course in each area. Courses satisfying the Core Course Requirement are: Analytical, 0141, 0142, 0144, 0145, or 0146; Inorganic, 0161, 0162, 0164, or 0165; Organic, 0150, 0151, or 0152; Physical, 0131, 0132, 0133, 0134, 0135 or 0136.
- (b) The Core Course Requirement must be fulfilled by the end of the student's **third** semester in residence or the student will be placed on departmental probation.
- (c) Students who do not fulfill the Core Course Requirement by the end of the fourth academic semester will not be allowed to continue in the Ph.D. program.
- (d) Students may place out of **one** of the four courses needed to satisfy the Core Course Requirement if they demonstrate graduate proficiency in that area by some other means. The particular way in which proficiency is demonstrated is at the discretion of the faculty who are in that division. *Placing out of a Core Course Requirement earns no course credit.*
- (e) For a transferred course (Section 3.5) to be counted toward the Core Course Requirement, the department must give written approval by checking the appropriate section of Form E.

3.3. *Total Course Requirement for Ph.D. Candidates.*

- (a) Ph.D. candidates must complete a total of six graduate level courses totaling at least 18 credits (courses numbered between 100 and 294, inclusive, but not including 0191, 0192, 0291) with a grade of B- or better.

The total of six courses includes those taken to fulfill the Core Course Requirement. The total course requirement must be fulfilled by the end of the fourth academic semester or the student will be placed on probation. Students who do not fulfill the total course requirement by the end of the fifth academic semester will not be allowed to continue in the Ph.D. program.

- (b) Graduate courses that fulfill the total course requirement may be taken in related fields outside the Chemistry Department with the approval of the research advisor and the graduate committee.
- (c) Full-time Ph.D. students should register for Chem0502 (Doctoral Continuation, Full-time). Part-time Ph.D. students should register for Chem0501 instead (Doctoral Continuation, Part-time). Every semester after the student joins a research group, the research advisor will formally evaluate the student's progress toward the degree as Satisfactory or Unsatisfactory.
- (d) At the end of their first summer, students are required to submit to the GC a 1-2 page research report that must be signed by student's research advisor.

- (e) First-year students are required to take the year-long course Chem0291: Professional Skills in Chemical Research.
- (f) First-year students are required to register for Chem0191, Seminars in Chemistry. All graduate students are **required** to attend the departmental seminar series to broaden their exposure to current areas of research activity. Attendance is noted, and demonstrates to the faculty that a student is genuinely interested in chemistry research.
- (g) *Teaching Requirement.* All graduate Ph.D. students are required to serve in a teaching capacity for a minimum of one semester. Two semesters are strongly recommended. Students serving as teaching assistants should register for Chem0405TA. TA support is contingent upon adequate performance and full cooperation with the instructor of the course and the Manager of Chemical Labs.

3.4 *Course Requirements for M.S. Candidates.*

- (a) M.S. candidates must complete at least 10 graduate level courses totaling at least 30 credits (courses numbered between 100 and 294, inclusive, including 0191, 0192, and 0291) with a grade of B- or better. Six of these courses must be in Chemistry. A student may elect to earn a minimum of 24 credits from classroom courses and six credits from research (0295, 0296). The courses must be chosen in consultation with the GC. For the purposes of counting courses, the sequence Chem 0291/0292 counts as one course, as does the sequence Chem 0191/0192.
- (b) Students may also elect to prepare a Master's thesis, which they must then present and defend before their research committee.
- (c) In lieu of research courses, two courses totaling no more than six credits may be approved independent study, with permission of the GC.
- (d) M.S. students are encouraged to take course Chem 0291: Professional Skills in Chemical Research. This course does not count toward the six required classroom courses in chemistry described in part (a), but does count toward the overall requirement for 30 credits.
- (e) M.S. students are encouraged to register for Chem 0191 and 0192, Seminars in Chemistry. These courses do not count toward the six required classroom courses in chemistry described in part (a), but do count toward the overall requirement for 30 credits. M.S. students are encouraged to attend the departmental seminar series to broaden their exposure to current areas of research. Attendance at seminars is noted.

3.5 *Graduate Committee policies for transfer of graduate course credit.*

- (a) Graduate courses taken prior to enrollment in the Tufts graduate program (taken at Tufts or elsewhere) may, under certain circumstances, be transferred and counted towards a Tufts graduate degree. Students wishing to transfer a course should file a written petition (**Form E**) with the GC. For a course to be eligible for transfer, the student must have earned a grade of B- or better in that course.
- (b) No more than two of the total required courses may be transferred from another institution for M.S. or Ph.D. candidates. An additional two graduate courses may be transferred if taken at Tufts.
- (c) Courses transferred must not have been counted toward a previously conferred baccalaureate degree. However, courses used towards advanced degrees earned at other institutions may be transferred, subject to the two course maximum.
- (d) Students should consult the Graduate School "Guide for Graduate Students" and ensure the course meets any Graduate School requirements prior to submitting **Form**

E to the GC.

3.6. *Additional Ph.D. requirements.*

In addition to completing course requirements and making consistent progress in research, Ph.D. candidates are required to:

- present a Research Topic to the research committee by the end of the third semester (see Section 6)
- present a Study Topic as a public seminar and defend it in a private meeting with the research committee by the end of the fourth semester (see Section 7)
- submit a third-year research report to the research committee by the end of the sixth semester (see Section 8)
- prepare and defend an original research proposal by the end of the eighth semester (see Section 9)
- defend a thesis (see Section 10)

4. RESEARCH ADVISOR

4.1 *Selection of the Research Advisor.*

- (a) The research advisor is the faculty member with whom the student chooses to collaborate on his/her thesis research project. Selection of a research advisor should be done thoughtfully, as student and research advisor work together very closely, and each has a vital interest in the progress of their collaboration. Often, the student will select a research problem from among several that the professor suggests as appropriate for the M.S. thesis or the Ph.D. thesis. In all cases, the student is expected to contribute to the direction of the work as the research progresses.
- (b) Departmental faculty research seminars are provided every fall semester. These seminars are a forum for faculty members to describe their research interests and activities. All entering graduate students are **required** to attend. Graduate students **may not** officially join a research group until after all the faculty research seminars are completed.
- (c) New students are strongly encouraged to inform themselves about the research interests of the faculty by reading background material, requesting additional material for in-depth study, and especially by visiting those professors and their graduate students whose work appears to be of greatest interest. These visits are the occasion for detailed discussions of the research the student might undertake as a thesis project.
- (d) In their first semester in the program, students are responsible for scheduling meetings with multiple faculty members and discussing the possibility of joining their research groups. The professor and the student should discuss the initial research problem on which the student would begin, the likely sources of future financial support during academic years and summers, and course work or other requirements the professor deems essential to the proposed research.
- (e) Students will submit three ranked choices of research groups to the Chair of the graduate committee (the deadlines will vary from year to year, but will generally fall in the first two weeks of November). The graduate committee will review the students' choices, and will match the students with available openings in research groups. Every effort will be made to place students into their most preferred research

group. If necessary, consultations among students and faculty will continue until mutually acceptable outcomes are reached. Maximizing the fit between student and research group is the ultimate goal of this process. Students are encouraged to talk to the GC chair and members during this process, to address any questions or concerns that may arise. Students will officially join research groups when the graduate committee notifies the department that the matching process is completed. Usually, students join research groups by the end of their first semester.

5. RESEARCH COMMITTEE

5.1 Selection and Purpose.

- (a) When the student is ready to present a Research or Study Topic (see Sections 6 and 7 below), the student and research advisor meet to choose a formal research committee. The committee is comprised of the research advisor and at least two other chemistry faculty members who agree to serve on the research committee. An additional member outside the department may also serve on a committee. The latter is particularly desirable when a student chooses an interdisciplinary research problem.
- (b) The research committee is charged with the following duties:
 - (i) Continue the academic advising function.
 - (ii) Approve and evaluate the Ph.D. candidate's research topic (See Section 6 below).
 - (iii) Approve and evaluate the Ph.D. candidate's study topic (See Section 7 below)
 - (iv) Evaluate the Third-Year Research Progress Report provided in the fifth or sixth semester (see Section 8 below).
 - (v) Evaluate the Original Research Proposal (see Section 9 below).
 - (vi) Evaluate the Thesis Defense (see Section 10 below).

5.2 Periodic Evaluation. The purpose of committee meetings is to evaluate the student's progress. These evaluations may result in the following actions (Ph.D. only):

- (a) Continuation in the Ph.D. program, which may be conditional upon satisfaction of a prescribed set of requirements.
- (b) Departmental academic probation.
- (c) Continuation in a M.S. program. This recommendation should be discussed with the student and should be consistent with the student's career objectives.
- (d) Dismissal from the program.

5.3 Committee Meetings and Evaluation of Research Progress

- (a) Committee meetings are important for evaluation of the student's academic and research progress. Required committee meetings are the Research Topic, the Study Topic, the Original Research Proposal, and the Thesis Defense. An additional committee meeting may be required by the committee or requested by the student as part of the third-year research progress report (see section 8). In some cases, supplementary committee meetings may be called to more closely follow a student's research progress.
- (b) All committee meetings (including the Study Topic, the Original Research Proposal, and any supplementary committee meetings) require a Research Progress Report in addition to other requirements. Questions regarding research progress will be part of each committee meeting, and the student's research progress will be evaluated at each committee meeting. Lack of progress in research will be cause for dismissal from the

program. The Research Topic and Thesis Defense meetings require more extensive summaries of research progress (see Sections 6 and 10 below).

- (c) The Research Progress Report should be a brief summary of research accomplished (up to two pages). The report should have two parts: a statement of the overall research goals of the thesis project(s), and an outline or summary of the student's research accomplishments since the last committee meeting. At each committee meeting, the student should be prepared to answer questions from the committee about research progress.
- (d) **One week** prior to each committee meeting, the student will provide all required written materials to the committee for review.
- (f) After each committee meeting, the student's research advisor will write a letter summarizing the student's strengths and weaknesses identified during the meeting. The letter should discuss the evaluation of the student's progress, specific points for the student to work on, and issues regarding oral and writing skills. The letter will be approved by all the attending committee members and given to the student. A copy will be placed in the department file for future reference.

6. RESEARCH TOPIC (Ph.D. Candidates)

6.1 Purpose. The Ph.D. is a research degree, and making sufficient progress in research is the primary responsibility of Ph.D. students. The Research Topic is designed to stress this most important aspect of a chemistry PhD. Oral and written presentations are a critical part of scientific research, and the Research Topic is also intended to provide practice in scientific communication. An additional purpose of the Research Topic is to encourage students to master the general field of their chosen research problem through careful literature searches and extensive background readings.

6.2 Subject matter, scope and depth. The subject matter for the Research Topic must be selected in consultation with the research advisor. The Research Topic is intended to be based on the student's own research project. The student is expected to demonstrate substantial depth in covering each of the following: description of the research problem, summary of the long-term and short-term goals of the project, scientific background, relevant literature and prior work, description of the planned approaches, knowledge of the techniques and instrumentation to be used, descriptions of key experiments and controls, anticipated data formats and modes of analysis, ability to understand and interpret relevant data, possible setbacks and alternative approaches, and potential applications of the research. Research progress to date should be incorporated within the Research Topic.

6.3 Format. The Research Topic requires a written report and an oral presentation. These should be prepared for a target audience of well-informed chemists (the Research Committee). The written report must be detailed enough to reflect a thorough graduate-level understanding of the topic and include extensive references to the relevant literature. The written report should be submitted to the research committee and the electronic copy should be sent to the departmental office at least **one week** prior to the oral presentation. The oral presentation is made with all research committee members present. Only under extenuating circumstances should the presentation be made with only two committee members present. In this case the third member must, through consultation with the other members and evaluation of the written report, concur with the research committee's evaluation. If the entire committee is not present for the oral

presentation of the Research Topic, it must be present at the oral presentation of the Study Topic.

6.4 Completion Date.

- (a) Students must attempt the Research Topic before the end of the third semester. Students must pass the Research Topic by the end of their fourth semester. A student who has not passed the Research Topic by the end of his/her fourth semester will be dismissed from the Ph.D. program.
- (b) Following each attempt of a Research Topic, the student must file **Form A** (appendix).

6.5 Guidelines for Preparing and Presenting the Research Topic. These minimum guidelines are provided to help students complete the Research Topic successfully.

- (a) The written report must be prepared with adequate attention to style, clarity, and logical organization. All material, including data, figures, and tables, must be appropriately referenced.
- (b) The expected level of scholarship includes understanding the origins and development of the chosen topic. Thus, the bibliography and references for the Research Topic must rely on the primary literature and not be drawn principally from reviews, textbooks, and other secondary sources. Figures should be original whenever possible, and figures copied from the primary sources must be referenced appropriately (See appendix on Plagiarism).
- (c) The written report should be aimed at a specialist readership. Although the length of the written report is dictated by the content, the suggested length is roughly 15-20 pages, with roughly 20-30 references.
- (d) The Research Topic must go beyond simple summaries of prior work in the field and the proposed experiments. The Research Topic must present a critical analysis of the existing literature and the project design.
- (e) The oral presentation will be private, involving only the student and the Research Committee. Thus, the presentation should be aimed at a specialist audience and should last 40-50 minutes. Generally, this presentation will be interrupted frequently by questions from the Research Committee and will therefore be more like a dialogue than a seminar presentation.
- (f) *Preparedness.* The student must demonstrate a thorough knowledge of the subject material both in the written and oral presentations, and in response to questions from the Research Committee. The student must display a familiarity with the relevant experimental or computational methods presented. The student must be able to place the Research Topic in the broader context of the field. This may be done by demonstrating a reasonable awareness of related techniques and subject matter and being able to evaluate and compare them. Anything the student writes or presents is assumed to have been a product of their own independent research and reflection, and written in their own words. Thus, the student should understand and be able to explain any words, formulas, or concepts used in their written report or oral presentation.

6.6 Evaluation.

- (a) The committee will evaluate the student's performance by the criteria described above. If the student fails a Research Topic, he/she will be placed on departmental academic probation. The student must present and pass a revised Research Topic by

the end of the probationary semester. If the Research Topic requirement is not completed by the end of the probationary semester, the student will be dismissed from the Ph.D. program.

7. STUDY TOPIC

- 7.1 Purpose.** Seminar presentations and the discussions that follow provide an important means of scientific communication. Oral and written presentations are a critical part of scientific research, and the Study Topic is also intended to provide practice in scientific communication. Breadth and depth in the major field is demonstrated by successfully completing an independent Study Topic in a field related to (but independent of) the student's own research. An additional purpose of the Study Topic is to further encourage students to use the library and on-line resources to master a topic in their major field.
- 7.2 Subject matter. The subject matter for the Study Topic must be selected in consultation with the research advisor.** The Study Topic can be drawn from all current primary chemistry literature. The subject may be thematically relevant to the student's general research area, but must be independent in substance from the student's research project. A Research Progress Report (section 5.3) must be provided as a stand-alone document, and research progress will be evaluated in a private question-and-answer session following the departmental seminar.
- 7.3 Format.** The Study Topic requires a written report and an oral presentation. These should be prepared for a chemically educated audience that includes graduate students and faculty members. The oral presentation must be presented as a departmental seminar. The written reports must be detailed enough to reflect a thorough graduate-level understanding of the subject and include references to the relevant literature.
- 7.4 Departmental seminar.** Annually, when the Department has determined available seminar dates, a sign-up sheet will be posted in the chemistry office. Students wishing to present a Study Topic in that year should select a date for presentation from the available list on a first-come, first-served basis. The written report should be submitted to the research committee and the electronic copy should be sent to the departmental office at least **one week** prior to the presentation. The presentation is made with all research committee members present. Only under extenuating circumstances should the presentation be made with only two committee members present. In this case the third member must, through consultation with the other members and evaluation of the written report, concur with the research committee's evaluation. If the entire committee is not present for the oral presentation of the Study Topic, it must be present at the oral presentation of the Research Topic.
- 7.5 Policy on Cancellation of Study Topic Seminar.** In the event that a scheduled Study Topic seminar is cancelled by the presenter, the Graduate Committee will **not** reschedule the seminar for the same semester as the cancellation. The student will be given an opportunity to sign up for a seminar date in the next semester *after* all other students wishing to present a study topic have selected dates. If a student is in her/his fourth semester in residence at the time of cancellation, then cancellation of the seminar is functionally equivalent to dropping out of the Ph.D. program. If the student has a legitimate and serious reason for canceling the seminar (such as grave illness or bereavement), and the student wishes to reschedule the seminar for the same semester, s/he may submit a written petition to the Graduate committee requesting a waiver of the policy.

7.6 Completion Date.

- (a) Students must attempt the Study Topic before the end of the fourth semester. Students must pass the Study Topic by the end of their fifth semester. A student who has not passed the Study Topic by the end of his/her fifth semester will be dismissed from the Ph.D. program.
- (b) Following each attempt of a Study Topic, the student must file **Form B** (appendix).

7.7 Guidelines for Preparing and Presenting the Study Topic. These minimum guidelines are provided to help students complete the Study Topic successfully.

- (a) The written report must be prepared with adequate attention to style, clarity, and logical organization. All material, including data, figures, and tables, must be appropriately referenced.
- (b) The expected level of scholarship includes understanding the origins and development of the chosen topic. Thus, the bibliography and references for the Study Topic must rely on the **primary literature** and not be drawn principally from reviews, textbooks, and other secondary sources. Figures should be original whenever possible, and figures copied from primary sources must be referenced appropriately (See appendix on Plagiarism).
- (c) The written report should be aimed at a specialist readership. Although the length of the written report is dictated by the content, the suggested length is roughly 15-20 pages, with roughly 20-30 references.
- (d) The study topic must demonstrate a sufficient synthesis of ideas and critical analysis of the subject matter, and go beyond simple summaries of individual primary papers. Direct quotes from the literature should be used sparingly and must always be referenced. Figures copied from the primary sources should also be thoroughly referenced. (See Section 11 Plagiarism)
- (e) The oral presentation will be a public seminar before the entire department. The presentation should be aimed at a knowledgeable chemistry audience (not a lay audience) and should last 45-55 minutes. Following the presentation, the student should be prepared to answer questions from audience members. The oral presentation and responses to questions must be lucid.
- (f) *Preparedness.* The student must demonstrate a thorough knowledge of the subject material both in the written and oral presentations, and in response to questions from the Research Committee. The student must display a familiarity with the relevant experimental or computational methods presented. The student must be able to place the Study Topic in the broader context of the field. This may be done by demonstrating a reasonable awareness of related techniques and subject matter and being able to evaluate and compare them. Anything the student writes or presents is assumed to have been a product of their own independent research and reflection, and written in their own words. Thus, the student should understand and be able to explain any words, formulas, or concepts used in their written report or oral presentation.

7.8 Evaluation.

- (a) At the end of the oral presentation, the committee will conduct a private oral exam of the student. The student may be questioned about any subject matter presented in the Study Topic, including experimental details, the Research Progress Report, basic chemistry knowledge, and any other subject areas deemed germane by the committee.

- (b) All faculty in attendance at the departmental seminar shall fill out a questionnaire (see attached Study Topic Evaluation-Faculty Audience Member). When the question period is complete, the committee chair will collect the forms from the faculty and will use them to assess whether the student's public seminar met the expectations of the department faculty. Individual forms or summaries of the audience faculty responses will be provided to the student. Other members of the audience (e.g. grad students, postdocs) may also fill out forms (see attached Study Topic Evaluation-General Audience Member) and return them directly to the student; these forms will not be used by the committee.
- (c) The committee will evaluate the student's performance by the criteria on the attached form (Study Topic Committee Evaluation Form) that summarize the requirements. Each committee member must either Pass or Fail the student. If *any* of the criteria are not met, the student must fail. If the student fails, must present and pass a new study topic on a different subject by the end of the probationary semester. In committees where there is a positive, but split, vote, then homework may be assigned to allay the concerns of the dissenting member. If the Study Topic is not attempted by the end of the 4th semester, the student will be dismissed from the Ph.D. program. If the Study Topic is not passed by the end of the 4th semester, the student will be placed on departmental probation. If the Study Topic is not successfully passed by the end of the probationary semester, the student will be dismissed from the Ph.D. program.
- (d) In addition to demonstrating proficiency in the literature study topic, the student must show sufficient research progress. Research progress will be evaluated on the basis of Research Progress Report (section 5.3) and question-answer session. The lack of sufficient progress in research may result in departmental probation or dismissal from the Ph.D. program.

8. THIRD-YEAR RESEARCH PROGRESS REPORT

An additional written Research Progress Report (see section 5.3) will be prepared in the fifth or sixth semester to update the committee on overall research progress; the electronic copy should be sent to the departmental office. Research progress will also be presented to the Research Committee (at least two members must be present) in a brief private presentation. The meeting will involve interactive questioning regarding the research project and research progress to date. **The student's research progress will be a major criterion for successful completion of this requirement.** Lack of progress in research will be cause for dismissal from the program.

If the student, advisor, or any research committee member requests a formal meeting at this point, one will be scheduled at the earliest possible time. Questions regarding the research will be part of this meeting and the student's research progress will be a criterion for successful completion of the requirement. If the student's committee deems that research progress is evident, but insufficient, they may decide to meet again after a finite time period to reevaluate the progress. Lack of adequate progress in research will be cause for dismissal from the program.

Following the approval of the Third-Year Research Project Report, the student should file Form C

9. ORIGINAL RESEARCH PROPOSAL (Ph.D. Candidates)

- 9.1 Definition and Purpose.** The Original Research Proposal is based on the literature rather than on the student's own research. It provides the opportunity to demonstrate both understanding and originality. The Original Research Proposal consists of a written document and an oral presentation and defense before the research committee.
- 9.2 Role of Research Committee.** As described in Section 5, the student's research committee will advise on the preparation of the proposal, and is charged with evaluating it as sufficient to satisfy this portion of the degree requirement.
- 9.3 Guidelines for preparing the Original Research Proposal.**
- (a) The written portion of the proposal should be in the form of a grant application (typically, in the NSF or NIH format) with objectives/specific aims, significance, introduction/background, proposed approach, experimental procedures, potential problems and suggested solutions, expected outcomes, and a conclusion. The proposal should be self-contained and fully referenced. It must clearly demonstrate the value, originality and creativity in the proposed research. The student should consult his/her research advisor on whether a budget must be included.
 - (b) The proposal as a whole is to be developed **independently**. Faculty or other students may provide only limited assistance with specific technical problems.
 - (c) If advice is needed as to whether a problem is suitable as a basis for a proposal, a meeting should be scheduled with the research committee to discuss these matters.
 - (d) A copy of the proposal should be given to each member of the research committee and the electronic copy should be sent to the departmental office at least **one week before** its presentation/defense.
 - (e) The statement of the problem must be precise and unambiguous.
 - (f) The literature pertaining to the problem should be documented. A consistent set of bibliographic conventions, preferably those used by a leading journal in the area of the proposal, should be used.
 - (g) The method of attack or approach should be described fully, including the feasibility of each step in the process proposed for solving the problem.
 - (h) The probable results of the proposed research should be fully described, along with an objective discussion of the implications of each result.
 - (i) Assumptions and uncertainties should be stated explicitly.
 - (j) An estimate of the time required to carry out the research should be made on the basis that the student would conduct the work. A budget detailing costs for equipment, computer time, and materials should also be included if recommended by the advisor.
 - (k) A Research Progress Report must also be prepared as a stand-alone document and submitted with the Original Research Proposal.
- 9.4 Completion Date.** The proposal must be successfully defended no later than the end of the **eighth semester** in residence. Students failing to complete this requirement will be placed on academic probation for one semester. The requirement must be completed by the end of the probationary semester or the student will be dismissed from the Ph.D. program.
- 9.5 Evaluation**
- (a) At the proposal defense, the research committee will discuss the proposal by probing the areas emphasized above. If appropriate, related aspects of the proposal may also be

discussed. The proposal will be judged on the basis of novelty of the research idea and the suitability of the proposed method of attack. The objective is to assess the independent research ability of the student at this stage of the Ph.D. degree work. The research committee will also address research progress by reviewing the Research Progress Report and asking questions about research progress to date. The research committee will deliberate in private at the conclusion of the defense and immediately inform the student of their decision. Upon approval of the research proposal by the research committee the student must file **Form D** (Appendix) with the Chair of the Graduate Committee.

9.6 Possible Actions of the Research Committee.

- (a) Acceptance of proposal.
- (b) Acceptance with *minor changes*. This action requires the candidate to incorporate the minor changes, but allows for the signatures of all committee members at the conclusion of the defense with no further re-examination necessary.
- (c) Acceptance contingent upon satisfactory completion of *major changes*. This category requires a re-examination of the corrected proposal by the committee, but no repetition of the oral examination.
- (d) Rejection. This action requires the student to prepare a new proposal.

10. THESIS AND FINAL ORAL DEFENSE (M.S. and Ph.D. Candidates)

10.1 Requirements. The "Guide for Graduate Students" published by the Graduate School of Arts and Sciences specifies the general thesis regulations. This section sets forth the further requirements of the Chemistry Department. Additional requirements for the thesis may be imposed by the research advisor or research committee. The Chemistry Department requires, as part of the procedure by which a thesis is approved, a formal oral defense by the candidate before an examination committee. This committee recommends action to the university regarding the thesis. The Chair of the Chemistry Department certifies completion of the degree requirements and recommends to the Dean of the Graduate School that the degree be awarded.

10.2 Selection and composition of the Examination Committee.

- (a) Three members of the Department and an additional member from outside the University are required for the Ph.D. thesis defense. Ordinarily, the members of the student's research committee serve as the Examination Committee. For the sake of maintaining the continuity of the committee, faculty members who have left the department during the year preceding the thesis defense may be considered as Department committee members.
- (b) Copies of the thesis must be delivered to the examination committee **at least TWO weeks prior** to the examination.
- (c) The student, in consultation with the Chair of the Examination Committee, arranges the time and place and notifies the Department Chair at least **TEN days** in advance.
- (d) M.S. examinations must be announced to the faculty of the Department, and Ph.D. examinations to the faculty of the University in the form of written announcements including the information listed below. A copy of the notice is also put into the student's file.
 - (i) Name of Student
 - (ii) Degree
 - (iii) Title of Thesis

- (iv) Names of Examining Committee, Chair and research advisor.
- (v) Time and place of examination
- (vi) Department of Chemistry

10.3 *Presentation & Defense.* As part of the Ph.D. requirements, the Ph.D. candidate is **required to make a public presentation** of the thesis work that is to be followed by a **private oral defense** in front of the Examination Committee.

10.4 *Possible actions of the Examination Committee.*

- (a) Acceptance of doctoral thesis.
- (b) Acceptance with *minor changes*. This action requires the candidate to incorporate the minor changes, but allows for the signatures of all committee members at the conclusion of the defense with no further re-examination necessary.
- (c) Acceptance with *major changes*. This category requires a re-examination of the corrected thesis by the committee, but no repetition of the oral examination.
- (d) Rejection. This action requires the student to prepare a new thesis, and generally involves additional research work. The Examination Committee will address a brief memorandum apprising the Department and GC Chairs of the situation.

11. DEPARTMENTAL ACADEMIC PROBATION

11.1 *Conditions Leading To Probation.* Departmental academic probation is a formal status a graduate student assumes when they have not met the requirements to remain in the program. Some reasons for a student being placed on probation include:

- (a) Unsatisfied Core Course Requirement (Sec. 3.2a) at the beginning of the fourth semester in residence (Ph.D. only).
- (b) Low overall grade point average in course work (less than B-).
- (c) Total Course Requirement not met after four semesters (Ph.D. only).
- (d) Research Topics not completed after three semesters (Ph.D. only).
- (e) Study Topics not completed after four semesters (Ph.D. only).
- (f) Original Research Proposal not completed after eight semesters (Ph.D. only).
- (g) Failure to meet deadlines or fulfill requirements stipulated by the student's research advisor or research committee. Progress in research is by far the most important requirement of the PhD program.

11.2 *Rectification.* A student on probation has one full semester to rectify the deficiency. **Departmental academic probation can only be removed by the Graduate Committee.**

11.3 *Consequences.* If not rectified by the end of the probationary semester the student will face dismissal from the graduate program. Such Ph.D. candidates may receive a M.S. degree if they have completed the requirements for that degree at the end of their probationary semester. Students on probation may become ineligible to receive a teaching or research assistantship or other financial assistance including federal aid.

12. TEACHING ASSISTANT GUIDELINES

12.1 Assignment. A teaching assistant (TA) is assigned to a course by the Laboratory Manager in consultation with the Department Manager and Department Chair. Questionnaires are sent to all eligible graduate students soliciting their preferences. However, the final decision rests with the Laboratory Manager.

12.2 Responsibilities. The teaching assistantship is a paid position which entails certain responsibilities. The course supervisor assigns all course-related work to the TA. Failure to fulfill the teaching responsibilities as delineated by the course supervisor is cause for dismissal as a teaching assistant. This may include not only loss of stipend but also loss of guaranteed support and tuition waiver.

12.3 Consensual Relationships.

- (a) Any amorous dating or sexual relationship while a TA is acting as an instructor, advisor, supervisor, or can exercise any authority over the student, is **impermissible**. Voluntary consent by the student under such circumstances is suspect, given the fundamental nature of the relationship. Moreover, other students may be affected by such behavior because it places the TA in a position to favor or advance one student's interest to the potential detriment of others. In addition to being in violation of University policy, such relationships may lead to defacto sexual harassment and prompt disciplinary action. This policy applies to both male and female TAs and regardless of who initiates the relationship.
- (b) In a situation where a student and a TA are more than casual acquaintances, the TA should request that the student be switched to another section in order to avoid any real or apparent conflict of interest.

12.4 Conflict of interests.

- (a) Since a TA is being paid by the Department to teach, it is improper for a TA to tutor for profit any student for whom the TA has official grading or tutoring responsibility. For example, a TA teaching *Instrumental Analysis* (Chem141) could tutor *Introductory Chemistry* (Chem1) students, whereas it would be improper for a Chem1 TA to tutor any Chem1 students since these TAs have shared responsibility for helping all Chem1 students during their office hours.

13. ETHICAL CONDUCT

All members of the Chemistry Department are required to maintain the highest of ethical standards in all of their research and teaching duties. Two documents which should be consulted are the Tufts University Handbook "*Honesty is the Best Policy*" published by the Dean of Students Office and "*On Being A Scientist - Responsible Conduct in Research*" published by the National Academy Press and available from the Chemistry Department Main Office (Pearson 110) or at <http://www.nap.edu/readingroom/books/obas/>.

Appendix I: PLAGIARISM

(Adapted From: *Academic Integrity at Tufts, Dean of Students, 1996*)

1. *A Definition of Plagiarism (From: H. Martin & R Ohmann, The Logic and Rhetoric of Exposition, Revised Edition, Holt Rinehard, 1963)*

The academic counterpart of the bank embezzler and of the manufacturer who mislabels their products is the plagiarist, the student or scholar who leads the reader to believe that what they are reading is the original work of the writer when it is not. If it could be assumed that the distinction between plagiarism and honest use of sources is perfectly clear in everyone's mind, there would be no need for the explanation that follows; merely the warning with which this definition concludes would be enough. But it is apparent that sometimes those of good will draw the suspicion of guilt upon themselves (and, indeed, are guilty) simply because they are not aware of the illegitimacy of certain kinds of "borrowing" and of the procedures for correct identification of materials other than those gained through independent research and reflection.

The spectrum is a wide one. At one end there is a word-for-word copying of another's writing without enclosing the copied passage in quotation marks and identifying it in a footnote, **both** of which are necessary. (This includes, of course, the copying of all or any part of another student's paper). It hardly seems possible that anyone of college age or more could do that without clear intent to deceive. At the other end there is the almost casual slipping of a particularly apt term which one has come across in reading and which so admirably expresses one's opinion that one tempted to make it personal property. Between these poles there are degrees and degrees, but they may be roughly placed in two groups. Close to outright and blatant deceit – but more the result, perhaps of laziness than of bad intent – is the patching together of random jottings made in the course of reading, generally without careful identification of their source, and then woven into the text, so that the result is a mosaic of other people's ideas and words, the writer's sole contribution being the cement to hold the pieces together. Indicative of more effort, and for that reason, somewhat closer to honesty, though still dishonest, is the paraphrase, an abbreviated (and often skillfully prepared) restatement of someone else's analysis or conclusion, without acknowledgement that another person's text has been the basis for the recapitulation.

The examples below should help clarify the differences between honest and dishonest use of source material. If instances occur in which these examples do not seem to apply, common sense and the use of the guidelines presented here should be of help in deciding.

2. *The Source*

It is in the nature of nature that its fuzzy details and seeming obscurities are clues to the world within. Optical rotation appears a curiosity even today, dealing as it does with the ability of some substances to rotate the plane of polarized light- a discovery made in France in the early nineteenth century. Light is a wave. With that wave there move along electric and magnetic fields, oscillating in space and time. In normal light the wavelike oscillation takes place in every plane. But it is possible to filter out "plane-polarized" light, which is still light, still possessing color and intensity, but different in the following way- in plane-polarized light the electric and magnetic fields that make up the light are restricted to oscillating in only one plane. The filters that create such special light from ordinary light are called polarizers. You've seen them in sunglasses and some airplane windows, and the Polaroid Corporation has made a lot of money on them.

From: R. Hoffman, The Same and Not The Same, Columbia U. Press, 1995, pp. 36-37

3. *Word-for-word*

The world contains many fuzzy details, which at first may appear to be obscurities, but they are actually clues to what's left to be revealed. Optical rotation appears a curiosity even today, dealing as it does with the ability of some substances to rotate the plane of polarized light—a discovery made in France in the nineteenth century. Light is a wave. With that wave there move along electric and magnetic fields, oscillating in space and time. In normal light the wavelike oscillation takes place in every plane. But it is possible to filter out "plane-polarized" light, which is still light, still possessing color and intensity, but different in the following way— in plane-polarized light the electric and magnetic fields that make up the light are restricted to oscillating in only one plane. The filters that create such special light from ordinary light are called polarizers. They are used in sunglasses and some airplane windows, as well as in Polaroid photographs.

This writer copied the text almost exactly, with only a few small changes in the first and last sentences. If the writer had enclosed all the copied text in quotation marks and had identified the source in a footnote, they would not have been liable to the charge of plagiarism; a reader might justifiably have felt, however, that the writer's contribution to the discussion was not very significant.

4. *The Mosaic*

The manner in which some substances are able to rotate the plane of polarized light, called optical rotation, was a discovery made in France in the early nineteenth century, but still remains somewhat of a mystery even today. Light is a wave that moves along electric and magnetic fields. In normal light the wavelike oscillation of light takes place in every plane. "Plane-polarized" light, on the other hand, has magnetic and electric fields that are restricted to oscillating in only one plane. But it is still light, possessing color and intensity. Polarizers are filters that create such special light from ordinary light. Polarizers are used often in modern technology. They are seen in sunglasses, some airplane windows, and, of course, Polaroid photographs.

Note how the following phrases have been lifted out of the original text and moved into new patterns:

- rotate the plane of polarized light
- a discovery made in France in the early nineteenth century
- Light is a wave
- In normal light the wavelike oscillation...takes place in every plane
- are restricted to oscillating only in one plane
- create such special light from ordinary light

As in the first example, there is really no way of legitimizing such a procedure. To put every stolen phrase within quotation marks would produce an almost unreadable, and quite worthless, text.

5. *The Paraphrase (P) of the Original (O)*

(P): Optical rotation is still somewhat of a marvel today, as it deals with the way in which some

(O): Optical rotation appears a curiosity even today, dealing as it does with the ability of some

(P): substances are able to shift the plane of polarized light. Ordinary light contains wavelike

(O): substances to rotate the plane of polarized light...In normal light the wavelike oscillation

(P): oscillations in many planes. Plane-polarized light, however, contain electric and magnetic

(O): takes place in every plane ...in plane-polarized light the electric and magnetic fields that

(P): fields that oscillate in just one plane. The filters that allow for separation into this kind

(O): make up the light are... in only one plane. The filters that create such special light from

(P): of light are called polarizers. Polarizers are used in sunglasses, various types of airplane

(O): ordinary light are called polarizers. You've seen them in sunglasses and some airplane

(P): windows, and the Polaroid Corporation has seen high profits from them.

(O): windows, and the Polaroid Corporation has made a lot of money on them.

The foregoing interlinear presentation shows clearly how the writer has simply traveled along with the original text, substituting approximately equivalent terms except where their understanding fails them.

Such a procedure as the one shown in this example has its uses; for one thing, it is valuable for the student's own understanding of the passage; and it may be valuable for the reader as well. How, then, may it be properly used? The procedure is simple. The writer might begin the second sentence with "As Hoffman notes," and conclude the paraphrased passage with a footnote giving the additional identification necessary. Or they might indicate directly the exact nature of what they are doing, in this fashion: "To paraphrase Hoffman's comment..." and conclude also with a footnote indicator.

In point of fact, this source does not particularly lend itself to honest paraphrase. The purpose of paraphrase would be to simplify or throw new and significant light on a text; it requires much skill if it is to be honestly used and should rarely be resorted to by the student except for the purpose, as was suggested above, of personal enlightenment.

6. *The "Apt" Term*

The manner with which some substances are able to rotate the plane of polarized light, or optical rotation, is not fully understood. Normal light contains oscillating waves on every plane. "Plane-polarized" light, on the other hand, which was discovered in the early nineteenth century, is made of electric and magnetic fields oscillating on only one plane. Polarizers are the filters that create such special light. These are used today in sunglasses, various airplane windows, and, of course, by the Polaroid Corporation.

Here the writer has not been able to resist the appropriation of two striking terms- "rotate the plane of polarized light" and "the filters that create such special light;" a perfectly proper use of these terms would have required only the addition of a phrase or two: The manner with which some substances are able to, as Hoffman explains, "rotate the plane of polarized light," or optical rotation, is not fully understood... Hoffman goes on to tell how polarizers are "the filters that create such special light."

Other phrases in the text above - "oscillating on only one plane," "oscillating waves on every plane": - are clearly drawn from the original source but are so much matters in the public domain, so to speak that no one could reasonably object to their re-use in this fashion.

Since one of the principle aims of a college education is the development of intellectual honesty, it is obvious that plagiarism is a particularly serious offense, and punishment for it is commensurately severe. What a penalized student suffers can never really be known by anyone but themselves.

Appendix 2: Forms

The following forms are contained at the end of the handbook for your use.

- Progress Summary Sheet for Ph.D. Candidates - Checklist for Student Use.
- Form A - Research Topic
- Form B - Study Topic
- Form C – 3rd-Year Research Progress Report
- Form D - Original Proposal
- Form E - Department Pre-Approval Form for Transfer of Credit Petition
- Study Topic Evaluation - Committee Member
- Study Topic Evaluation - Faculty Audience Member
- Study Topic Evaluation - General Audience Member

NOTE: Upon completion of the requirement, the respective form must be completed by the student, signed by all the research committee members, and then submitted to the Chair of the Graduate Committee.

The following forms not included here are contained in the "Handbook for Graduate Students" published by the Graduate School of Arts and Sciences:

- Recommendation for Award of M.S. Degree
- Recommendation for Award of Ph.D. Degree
- Request for Leave of Absence or Extension of Time
- Petition for Transfer of Credit
- Transcript Request for Petition of Transfer of Credit
- Approval of Thesis/Dissertation for Binding
- Certificate of Fitness
- Change of / Address / Name / Advisor

The Graduate School of Arts and Sciences forms should be completed by the student and submitted to the Graduate Committee Chair. The forms will then be returned to the student who should forward them to the Graduate School.

PROGRESS SUMMARY SHEET (Ph.D. Candidates)

Name _____ Semester Enrolled _____

Research Advisor _____

REQUIREMENT	COMPLETION DATE	STATUS
1) Core Courses (Sec. 3.2a)	End of 3 rd academic semester.	Analytical <input type="checkbox"/> Inorganic <input type="checkbox"/> Organic <input type="checkbox"/> Physical <input type="checkbox"/>
2) Course "Professional Skills in Chemical Research"	End of 2 nd academic semester	
3) Summer Research Report (1-2 pp, signed by Research Advisor)	End of the 1 st summer	
4) Research Committee (In addition to Advisor)	At selection of Research or Study Topic.	2) _____ 3) _____
5) Graduate Course Work (Two minimum in addition to Core Course Requirement)	End of 4 th academic semester.	<input type="checkbox"/> <input type="checkbox"/>
6) Research Topic	Before the end of 3 rd semester.	<input type="checkbox"/>
7) Study Topic (Public Seminar)	Before the end of 4 th semester.	<input type="checkbox"/>
8) Teaching	Anytime	<input type="checkbox"/>
9) Third-Year Research Progress Report	5 th or 6 th semester.	<input type="checkbox"/>
10) Original Proposal	No later than end of 8 th semester	<input type="checkbox"/>
11) Written Thesis	No less than two weeks prior to oral defense.	<input type="checkbox"/> Copy submitted to each examination committee member.
12) Thesis Defense		<input type="checkbox"/> ☺

FORM A

Research Topic

_____ has completed the written
(Name)

report and oral presentation of a Research Topic on _____.
(Date)

Research Topic title:

Attempted

Passed

Research Committee Signatures:

(Research Advisor)

(Committee Member)

(Committee Member)

**After completion of the Research Topic, this form
must be completed by the student, signed by Committee Members,
and returned to Debbie D'Andrea**

FORM B

Study Topic

_____ has completed the written
(Name)

report and public presentation of a Study Topic on _____.
(Date)

Study Topic title:

Attempted

Passed

Research Committee Signatures:

(Research Advisor)

(Committee Member)

(Committee Member)

**After completion of the Study Topic, this form
must be completed by the student, signed by Committee Members,
and returned to Debbie D'Andrea**

FORM C

3rd Year Research Progress Report

_____ has completed the written
(Name)

report and oral presentation of a Research Progress Report on _____.
(Date)

Research Project Title:

Attempted

Passed

Research Committee Signatures:

(Research Advisor)

(Committee Member)

(Committee Member)

After completion of the 3rd Year Research Progress Report, this form must be completed by the student, signed by Committee Members, and returned to Debbie D'Andrea

FORM D

Original Research Proposal

_____ has completed the written
(Name)

report and oral presentation of an Original Research Proposal on _____.
(Date)

Original Research Proposal title:

Attempted

Passed

Research Committee Signatures:

(Research Advisor)

(Committee Member)

(Committee Member)

**After completion of the Original Research Proposal, this form
must be completed by the student, signed by Committee Members,
and returned to Debbie D'Andrea**

FORM E

Department Pre-Approval Form for Transfer of Credit Petition

Please fill out the top part of this form and then file it with any member of the GC. The course syllabus and description, as well as a completed Tufts Graduate School Transfer of Credit Form (available in the Graduate Student Handbook at: <http://ase.tufts.edu/gradstudy/GSAShdbk.pdf>) must accompany this form. Please use a separate Form E for each course.

To be filled out by student:

Today's date:

Student:

Course number and title:

Date course taken (semester/year):

Where course was taken:

For Tufts Chemistry GC use:

Tufts equivalent course (if any):

- This course satisfies the Core Course Requirement in:

- This course does not satisfy a Core Course Requirement but may be counted toward the Course Requirement.
- This course may not be used toward an advanced degree in Chemistry at Tufts.

Signature of Tufts Instructor _____
(if applicable)

Signature of GC Representative _____

Signature of Department Chair _____

Study Topic Committee Member Evaluation Speaker: _____ **Date:** _____

The following points are identified in the Department's Academic Requirements and Procedures Handbook as the minimum requirements that must be met to complete successfully the study topic requirement. Failure to meet any one of these requirements, as determined by a majority of the student's faculty committee, will result in failure of the study topic attempt.

Public Seminar:

1) Presentation was sufficiently detailed and reflected a graduate-level understanding of the material.	<input type="checkbox"/> Yes <input type="checkbox"/> No
2) Presentation was aimed at a chemically educated general audience.	<input type="checkbox"/> Yes <input type="checkbox"/> No
3) Formal presentation was of adequate length (>45 minutes, ideally 50 minutes).	<input type="checkbox"/> Yes <input type="checkbox"/> No
4) Oral presentation and responses to questions were sufficiently lucid.	<input type="checkbox"/> Yes <input type="checkbox"/> No
Comments:	

General Guidelines

1) Presenter demonstrated an adequate knowledge of subject matter.	<input type="checkbox"/> Yes <input type="checkbox"/> No
2) Presenter displayed familiarity with relevant experimental or computational methods.	<input type="checkbox"/> Yes <input type="checkbox"/> No
3) Presenter could place study topic in broader context of the field. (Demonstrated awareness of related techniques; Able to evaluate and compare them.)	<input type="checkbox"/> Yes <input type="checkbox"/> No
4) Presenter was able to explain sufficiently any words, formulas, or concepts presented.	<input type="checkbox"/> Yes <input type="checkbox"/> No
Comments:	

Written Report

1) Report was prepared with adequate attention to style, clarity and organization.	<input type="checkbox"/> Yes <input type="checkbox"/> No
2) Material obtained from the literature (Tables, Figures, Data, ...) was properly cited.	<input type="checkbox"/> Yes <input type="checkbox"/> No
3) The study topic was drawn primarily from the primary literature and not principally from review literature.	<input type="checkbox"/> Yes <input type="checkbox"/> No
4) The study topic demonstrated a sufficient synthesis of ideas and critical analysis of the topic.	<input type="checkbox"/> Yes <input type="checkbox"/> No
Comments:
